DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 19 is rejected under 35 U.S.C. 102(b) as being anticipated by Bednarek et al. (US 6120500). Bednarek et al. dislcose an ablation catheter comprising a catheter shaft, the shaft comprising a proximal portion, a distal portion, the distal portion comprising an outer peripheral wall having an active region, wherein the distal portion has a cross-sectional configuration along the active region and the cross-sectional configuration is adapted to bias the active region against the tissue to be ablated.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 5-9, 11, 12, 14/12 and 15-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bednarek et al. (US 6120500) further in view of Takahashi et al. (US 6231585). Bednarek et al. teach all of the limitations of the claims except the cross-sectional configuration including a flattened outer peripheral wall and the dimensions of the aspect ratio as claimed.

Takahashi et al. disclose a catheter and teach that it is old and well known in the art to provide a catheter with a cross-sectional perimeter of various shapes including a

Art Unit: 3739

flattened outer peripheral wall to stabilize the device within the treatment location.

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to construct the Bednarek et al. catheter such that its cross-sectional perimeter includes a flattened outer peripheral to stabilize the device within the treatment area as taught by Takahashi et al.

Page 3

Furthermore, it would have been obvious to construct the cross-section of the catheter according to the aspect ratio as claimed, since it has been held that discovering the optimum size involves only routine skill in the art.

Response to Arguments

Applicant's arguments with respect to claims 1, 5-9, 11, 12, 14/12 and 15-19 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rosiland S. Rollins whose telephone number is (571) 272-4772. The examiner can normally be reached on Mon.-Fri. 9:00 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda C. Dvorak can be reached on (571) 272-4764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
